

## Test 11 — Model, View, Controller (Part 2)

### C# Programming

This is a timed test. You have thirty minutes to complete the test. When you finish the test, upload your **Program.cs** to Canvas. Do not publish your answer to your **git** repository.

Write an ASP.NET MVC application. Create a Person **model** with at least four properties, and a People **model** as a repository that will contain Person objects. Create a **controller** that has an action method that displays all Person objects in the repository. Create a **view** that displays your People. Your deliverables are as follows, preferably as a zip archive:

1. your model source folder (all classes),
2. your controller source code,
3. your view source code (all .CSHTML files), and
4. a screenshot of your running application.

Upload your deliverables to Canvas. Do not push them to Github.
